

Summer School Course Evaluation Results 2024

EC202: Intermediate Macroeconomics Session 2

Course Enrolments	Survey Responses	Response Rate
122	93	76%

How would you rate the course overall?

EC202	4.0
EC courses overall	4.3
Programme overall	4.4

Would you recommend
the LSE Summer School
to a friend?

	Yes	No
EC202	97% 90	3% 3

	Yes	No
Programme overall	98% 5,830	2% 130

How would you rate the following factors?

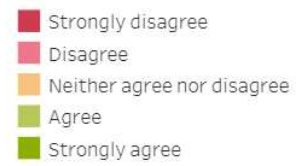

The red line indicates the Summer School benchmark for excellence at 4.2

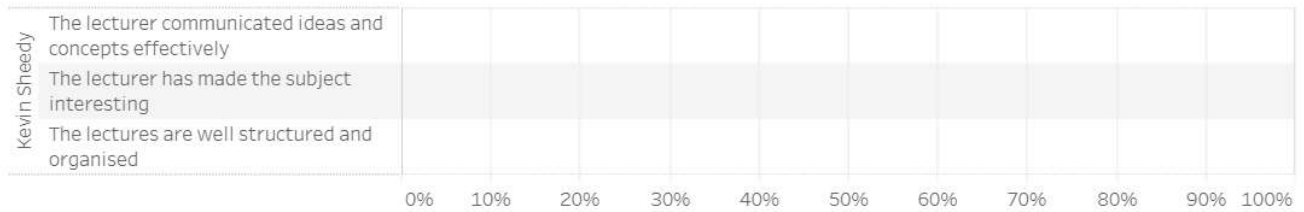

Teaching staff

Lecturer	Kevin Sheedy	
Class teacher	Charlie Nourse	
	Francisco Libano-Monteiro	4.5
	Tom Glinnan	

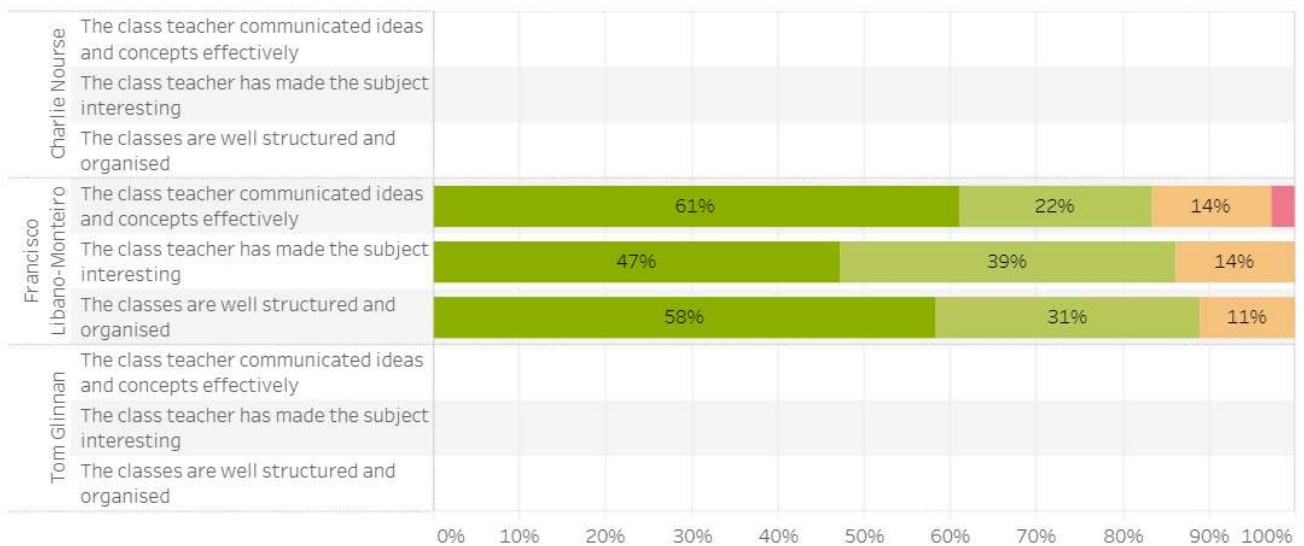

Teaching Statements

Lecturers

Class Teachers

What did you like best about the course?
I enjoyed how organized everything was
Clear explanation
It was interesting
The credit (hopefully)
I liked my professor the best because he allowed for the material to be presented in a clear and organized manner
Having lectures recorded. It would be impossible to keep up with all the material without that.
The class teacher Tom Glinnan is very good at teaching, he made my concept clear and the lessons were comprehensive and informative.
I studied intermediate macroeconomics in the summer school. The teachers were very friendly and answered all our questions seriously and responsibly. I also benefited a lot from it.
the subject material, i.e. bank runs
My TA Charlie was great
The concepts we learned about were interesting
Discussion of modern political applications
The classes from Charlie and how he would explain the summary of the lectures and what we needed to learn for the exams.
Content
The material was interesting
Some sections were interesting.
Teacher
Content on growth, which is vastly more relevant and interesting than the material about bank runs.
The TA sessions being informative and engaging
Both lecturers and tutors are friendly and are willing to provide support for students.
I enjoyed the small group class discussion as Tom seemed to thoroughly understand the material and explained concepts well. However, I felt they were a bit unorganized in their structure and it was difficult to follow along at times.
I liked the models and materials we learned it was actually very interesting.
My TA (Francisco) was excellent and made the classes really interesting, and tied the content to the questions really well. He was also super accessible and passionate about the material!
My TA was great, and so was the library - I really like this library for some reason
The smaller classes.
its abundant content
Its content / the topics covered
Smaller class session with TA. Tom Glinnan was very knowledgeable and kind.
It went hand in hand with the content I learned in my session 1 intermediated Microeconomics class.
The people
The content was interesting
I liked the lectures and how there were slides
As I said previously, it's the way you use mathematics to teach and understand concepts and topics of economics. Not only that, but I also believe you endorse the area of macroeconomics so much that you expect your students to insert microfoundations into the models we see and use. From where I come, this is more of a Master's thing. So I would say that I have learned so much during these 3 weeks that it's even difficult to say.
What I liked best about the Intermediate Macroeconomics course at LSE was the thorough exploration of macroeconomic theories and their real-world applications, which provided valuable insights into how economies function on a global scale.
The concepts and ideas.
I liked being able to learn about macroeconomics from a bit different perspective - being in the UK as opposed to the US.

Tom Glinnan is a very good teacher.
I thought the content was super interesting
I liked the two period models the most.
Very well-structured, Charlie was an amazing TA who was great at answering the questions we had.
Very organized
The knowledge and the depth of the course
Learning
The content itself I found to be very entertaining. I enjoyed very much the topics covered. In addition, the seminar professor Charlie made the extensive contents of the course easier to digest and understand. Great professors and academic methodology.
How helpful my teacher was in explaining all the concepts.
The classroom discussion were my favorite part, supplemented the lectures very well.
Use of real-world examples in lecture, openness of professors to answering questions.
some interesting concepts
I liked how this EC202 course tied in the class concepts to real world examples and data.
The way francisco taught the recitation
The seminars were very helpful with tying everything in together
The recitations because they helped me understand the content better
Is there anything we can improve about the course?
Lecture time is way too long
Too fast paced and the midterm was poorly created as it did not accurately fully reflect what was provided to us and said to study. We did not receive the midterm on time which provided students with more stress as final exam was right around the corner.
Adjust the material to be more digestable in such a short time frame. I spoke to students in different courses and EC202 seemed to be remarkably more difficult than the rest, despite it being a lower level econ class.
More prep for the midterm. Lot of content for only small amount of concepts to be tested.
It's focused heavily on models but there is no real focus anything else.
I would have loved to know my midterm grade in order to know how much to stress for the final
lecture is too long. I recommend lecture around 2 hours will be more suitable.
A reframe of the materials; less topics and more depth
Earlier lectures
Make the lectures more interactive
maybe more focus on key themes and a bit less overall content
Make it lighter, more convenient, less lecture time and more class time.
Less rushing through, although I understand the time constraints
The course is very poorly organized. The grades for the midterm were not returned to 1-2 days before the final (More than a week after the exam). Professor and TA dont communicate with each other. Makes the course very unorganized and hard to follow.
Overall, course was quite boring. Teachers made no attempt to engage students or facilitate any collaboration. Studied for 10+ hours across a few days for the midterm and felt awful upon completion of the midterm exam. Small group teacher had to correct his own notes in numerous lectures and was even corrected by students on some occasions. Midterm feedback still has not arrived as I am filling out this survey, despite the fact that the final exam is two days from now. Content that was learned/practiced the day before the exam was on the exam, so very little time to internalize anything or really understand it. Felt like I had to just memorizing things to pass the class as opposed to actually learning and internalizing concepts, because of the timing and depth of material.
Please provide midterm grades at some point less than a week. In a 3-week class, this means that I still don't know what my weaknesses were on the midterm now that I should be studying for the final. It's impossible to judge how much to study without any grades.

Evaluation Comments - EC202 (S2)

Get grades out when promised - 2 days before the final and we still do not have midterm grades despite the final being in 2 days - Make the information engaging for students in the slightest - Have lecturer and TA's on the same page, all TA's tell their students different things and cover different material - Give students resources to succeed - Focus more on conceptual and intuitive content rather than a bombardment of algebra and graphs that do not explain the underlying concepts of macroeconomics.
Maybe our lecturer and tutor can work out the proof of some equations and draw the macroeconomic models in the lecture and tutorial rather than just showing us.
I still have not received my midterm grade a week later
It is two days before the final exam and we have not yet received our midterm scores. I think timely feedback would improve my comprehension of the subject material and help guide my studying process.
I mean besides the fact you make students do two classes a day and then expect them to return home and study is unrealistic.
It felt like the mid-session examination was unfairly difficult given the content that we had covered during the session - something that was certainly not true when I took EC235 in session 1!
Make the midterm feedback come out before the day before the final but thats about it
Cut down the lecture time or increase breaks.
but I feel a bit stressful to command too much content
Teaching could be more interactive (both lectures and classes). * Update the presentations used; they often contain old data, while the last few years are often interesting from a macroeconomic point of view (corona, energy crisis, etc.). * I liked the model-based explanations of the different topics, but I feel that the link to the real world could be made stronger, for example with more examples of current (recent) macroeconomic policy decisions/dilemmas (news articles/videos, etc).
Midterm grades took very long. I was anxious about Midterm score while studying for final and we only ended up getting them the day before. Would have been fine if expectations weren't clearly Monday/Tuesday, only for it to be pushed every day until Thurs.
The mid-term grades took a little while to come back.
It's appalling to receive the mid course grades the day before the final exam!! In addition to that the workload is too much: macroeconomics concepts are difficult per se and trying to explain them in 20 minutes makes everything worse: reduce topics and use more exercises
I am doing this survey on the Thursday of the third week and still have not gotten my mid term grade back
Give scores back from the midterm faster - less class time 4.5 hours everyday is to much
It would've been helpful if the lectures were more hands on, such as drawing out the graphs instead of then just appearing on the slide
As I said before, I believe it is too much content to be taught in 3 weeks. However, I do highlight that I come from Brazil, and there we have a whole different idea of how to teach and prepare economists to the world. But I do prefer the LSE's way. I do hope someday I'll be back to study more. This is like a paradise on earth for those who love economics.
Maybe better study materials, such as recommended videos or better worked out solutions to problems.
The course content did not prepare us well for the exam.
Maybe less emphasis on material that wont be tested on.
More relevant / directed preparation for examinations would be helpful.
Maybe don't give the midterms back the day before the final exam
I enjoy the rigorous academic methodology, however in this case I believe the contents might have been too much in terms of extensiveness. A shorter syllabus would allow students like me, that were more interested in learning, to deep-dive in fewer topics and perhaps get to a greater understanding of them, rather than a less profound understanding of a larger amount of topics. (That still was good in my opinion)
make the lecture more interesting and interactive somehow.
There were times the 3 hour lectures were a bit redundant and felt unnecessary.
maybe focus lectures more on what will be assessed

Evaluation Comments - EC202 (S2)

I would say covering less content because at times it felt as though we were just briefly covering concepts rather than going in depth.

Make the lectures more interesting. 3 hours is long so some interactive portions would be nice.
